EDUCATION

Northeastern University

Boston, Massachusetts

Candidate for Honors Bachelor of Science in Computer Science and Mathematics

Expected May 2026

- **GPA:** 3.79 / 4.00
- **Awards:** Northeastern Honors Program, Deans List

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Python, Java, C, C++, SQL, Bash

Technologies: Nvim/Vim, Docker, Git, AWS S3 & Lambda, Nix

Frameworks/Libraries: PySpark, Pandas, Polars, React.js, React-Native, Next.js, Vue.js, Nuxt.js

EXPERIENCE

Software Engineer Co-Op

January 2025 – Present

Morse Corporation

Cambridge, MA

- Built core infrastructure for data analysis pipelines aimed at algorithmic testing and evaluation of object detection models.
- Designed a scalable test harness with **Apache Spark**, supporting parallel data processing on **100 million+** metrics giving team members insights into model performance.
- Deployed model runners and inference processing pipelines with **OpenCV**, automating metrics for multiple vendors and reducing metric turnaround time by over **50%**.

Technical Lead

September 2024 – April 2025

Generate Product Development Studio

Boston, MA

- Led a team of 7 engineers, designing containerized **RESTful** web server applications through the OpenAPI specification.
- Designed a distributed web server that supported multimedia compressing/serving through **AWS S3** and push notifications using **AWS Lambda**.
- Enabled real-time notification services through **Supabase** database subscribers and designed type-safe database transactions with **Drizzle-ORM**.

Lead Lab TA for Fundamentals of Computer Science I

September 2024 – December 2024

Khoury College

Boston, MA

- Helped **600+** introductory computer-science students by teaching systematic program design with topics including structural recursion and accumulators using Racket ISL.

Software Engineer Co-Op

January 2024 – August 2024

Spill Center

Hudson, MA

- Created a centralized web application for cargo tank owners and operators using **Nuxt.js**, enabling customers to view detailed reports on over **800,000+** cargo tanks.

PROJECTS

Dearly | *TypeScript, React-Native, Docker, AWS S3/Lambda, PostgreSQL*

- Dearly is a private family-sharing app bridging generational gaps and makes staying connected easier and more meaningful.
- Deployed CI/CD pipelines through **Github Actions**, automating over **500+** integration tests written with **Jest** and containerized deployments using **Docker**.
- Cached API requests using **TanStack-Query** and compressed image/audio content through **Sharp.js**, leading to an **80%** decrease in API calls and **50%** faster loading times.

Fluid-OAS | *TypeScript*

- *Fluid-OAS* is a declarative *domain specific language* expressing type-safe HTTP APIs through the OpenAPI specification.
- Created a fluent, object-oriented API allowing developers to repeatedly chain together methods by using *mixins*, enabling for more maintainable OpenAPI specifications.
- Maintained backwards compatibility between all OpenAPIv3 specifications through interface segregation, providing support for more than **2000+** developers on npm.
